## installing ROS-Ubuntu 20.04

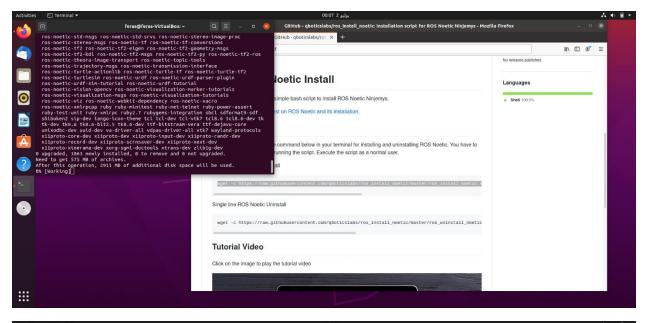

## First, installation of ubuntu on virtualbox

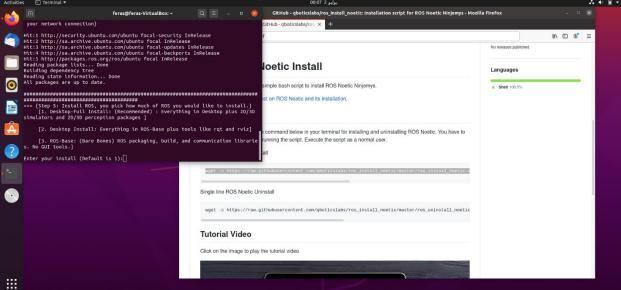

**Then,** we open ubuntu then open the terminal then paste:

wget -c
https://raw.githubusercontent.com/qboticslabs/ros\_install\_noetic/master/ros\_install\_n
oetic.sh && chmod +x ./ros\_install\_noetic.sh && ./ros\_install\_noetic.sh
provided in: https://github.com/qboticslabs/ros\_install\_noetic

then, it will ask you if you want the default? 1 is pressed for default

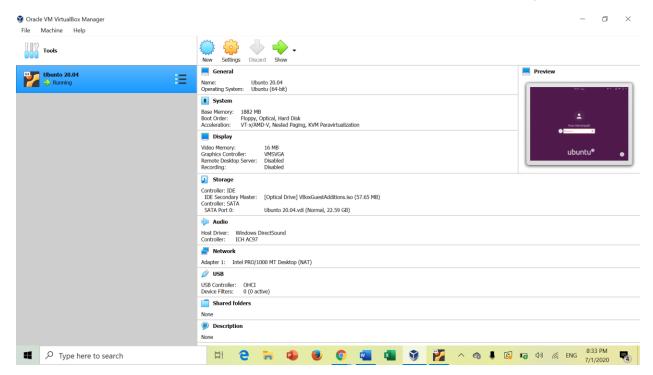

Finale, after installation we put (<u>rosversion -d</u>) to make sure it was install

Noetic it means installation success.

## تثبیت نظام روز-اوبنتو

أولا، تثبيت اوبينتو على فيرتشوالبوكس

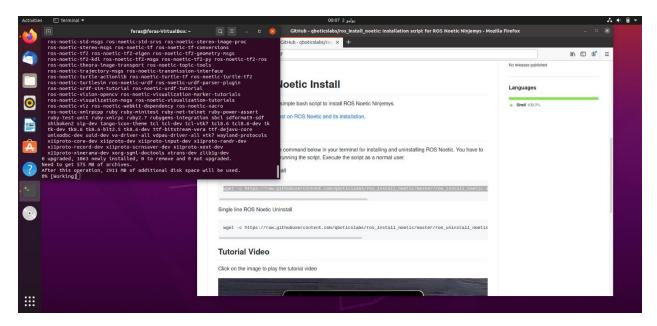

بعد ذلك، نقوم بفتح الاوبنتو ثم بعد نقوم بفتح نافذة التيرمينال ونلصق:

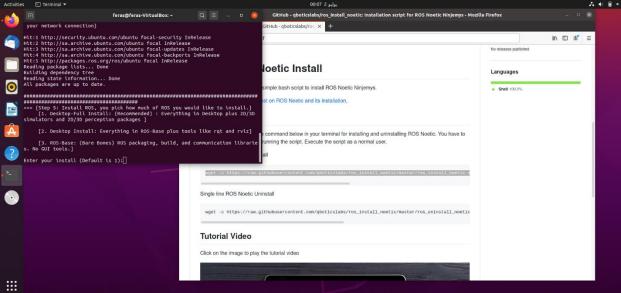

wget -c

https://raw.githubusercontent.com/qboticslabs/ros\_install\_noetic/master/ros\_install\_n
oetic.sh && chmod +x ./ros\_install\_noetic.sh && ./ros\_install\_noetic.sh

: https://github.com/qboticslabs/ros\_install\_noetic

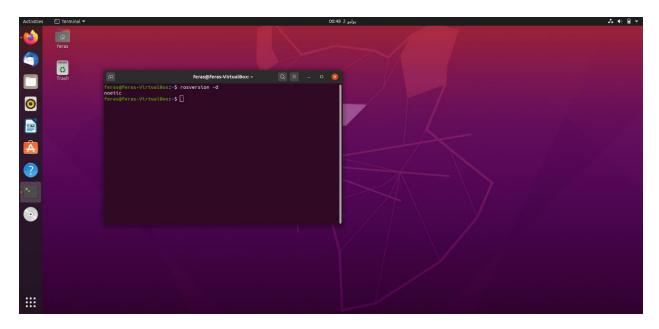

بعد ذلك، نقوم بوضع الرقم 1

أخيرا، بعد بعد انتهاء التثبيت نقوم بوضع للتأكد:

(rosversion -d)

## **Noetic**

وهذا يعني التثبيت ناجح
